APC88
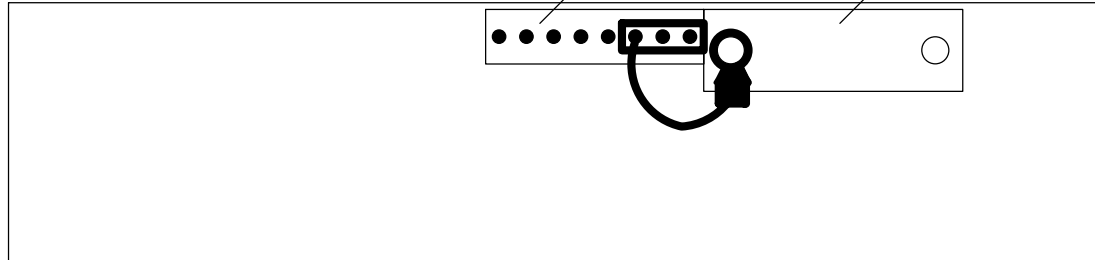

8-pin Panduit Header   DB9

Instructions:
1) Remove DB9 jackscrew closest to 8-pin Panduit header.
2) Remove and discard washer.
3) Slip Grounding jumper lug into jackscrew. Use jackscrew supplied in kit. Make sure lug body is angled up toward jackscrew head.
4) Screw jackscrew (with lug) down tight, making sure the spacer between the DB9 and PCB is in place. The lug body should now be angled away from PCB components.
5) Place 3-pin Panduit female connector onto 8-pin Panduit header as shown in figure. This connects Panduit header pin 3 (signal GND) to Jackscrew (chassis GND).
