TP-USB

PICK HIT 2009 Radio
The SAS TP-USB is a revolutionary USB audio interface for your studio.
The new SAS USB Turret Panel provides hosts, producers, talent or studio guests an easy way to connect their laptop to the SAS audio network. You will see an immediate improvement in audio quality, bypassing the typical low grade sound cards built into most laptops. This turret module is equally at home in a small guest position turret or as part of a full Rubi-T console.

Rack Mounts too! The TP-USB is also available in a rack mount configuration with up to 4 modules mounting in a 19" wide panel. Connect your studio computer to the rear USB connector on the TP-USB for a clean installation with professional audio quality without the hassle of sound cards, drivers and cable harnesses.

Not just for SAS users.
Essentially, the TP-USB is an external sound card for a Windows or Mac computer. Requiring no drivers, it appears in your sound control panel as an alternative to your built-in audio devices and is immediately usable by any software. Since the audio connections to the TP-USB are just audio, this unit will work for any application that demands excellent audio specifications from your PC.

Awesome Audio. The TP-USB provides bi-directional audio in both AES and balanced audio formats. Our use of an external power supply allows us to produce clean audio with incredible headroom - quality not possible with USB bus powered devices. And our 24 bit digital conversion engine provides clarity and definition way beyond 16 bit models. Designed, built and programmed by SAS engineers, you won't find anything that compares.
